Prepare data for the Central Registry

Introduction
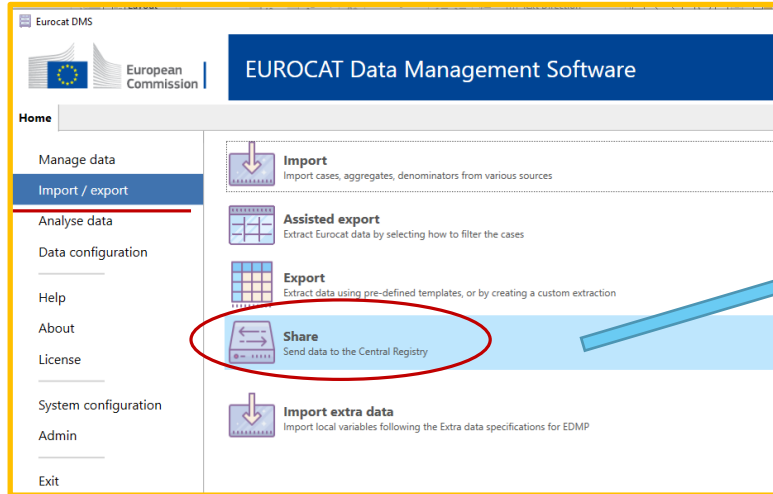

- The section *Home>Import/Export>Share* allows to generate the *csv* files to share data with the EUROCAT Central Registry.

- You can prepare either individual cases (page 4) or denominators (page 5) or aggregated data from individual cases (page 6, for associate registries).

- For individual cases, you can chose between 3 presets for a quick selection of the variables to export:

  - **Full data:** All variables (both Eurocat and local ones) are marked for extraction. See chapter 2.2.2 and 2.2.4 of the Eurocat Guide 1.5.

  - **Eurocat data:** Only Eurocat variables are marked for extraction. See chapter 2.2.2 of the Eurocat Guide 1.5.

  - **Core data only:** Only the core Eurocat variables are marked for extraction. See chapter 2.2.2 and 2.2.4 of the Eurocat Guide 1.5.

- Once ready, the *csv* files generated have to be uploaded and sent to the Central Registry through the data exchange portal (access reserved to a list of authorised users).
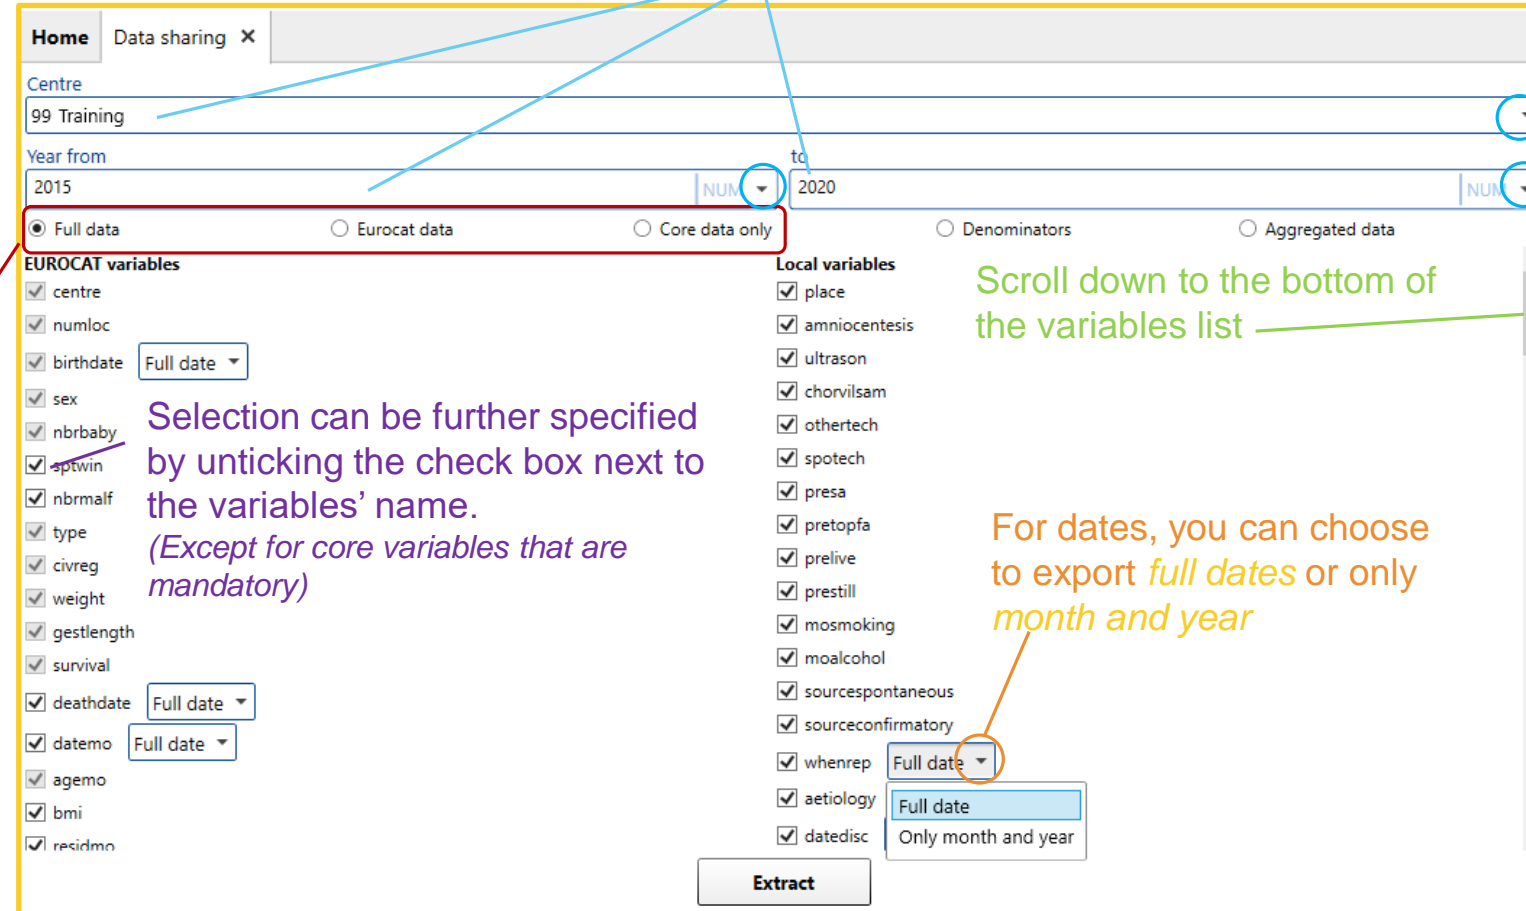

Table of contents

Share individual cases

Select the data to export

Select the Centre and the years for which you want to extract individual cases.
(click on the arrows to display the dropdown lists or start typing the name of the registry or the year)

Scroll down to the bottom of the variables list
Selection can be further specified by unticking the check box next to the variables' name.
(Except for core variables that are mandatory)

Choose which variables to extract

For dates, you can choose to export *full dates* or only *month and year*

Import — Import cases, aggregates, denominators from various sources

Assisted export — Extract Eurocat data by selecting how to filter the cases

Export — Extract data using pre-defined templates, or by creating a custom extraction

Share — Send data to the Central Registry

Import extra data — Import local variables following the Extra data specifications for EDMP

Centre
99 Training

Year from: 2015 — to: 2020

○ Full data   ○ Eurocat data   ○ Core data only   ○ Denominators   ○ Aggregated data

EUROCAT variables
- centre
- numloc
- birthdate — Full date
- sex
- nbrbaby
- sptwin
- nbrmalf
- type
- civreg
- weight
- gestlength
- survival
- deathdate — Full date
- datemo — Full date
- agemo
- bmi
- residmo

Local variables
- place
- amniocentesis
- ultrason
- chorvilsam
- othertech
- spotech
- presa
- pretopfa
- prelive
- prestill
- mosmoking
- moalcohol
- sourcespontaneous
- sourceconfirmatory
- whenrep — Full date
- aetiology
- datedisc

Full date
Only month and year

Extract

4

Share denominators
## *Select the data to export*

Select the Centre and the years for which you want to extract denominators.
(click on the arrows to display the dropdown lists or start typing the name of the registry or the year)
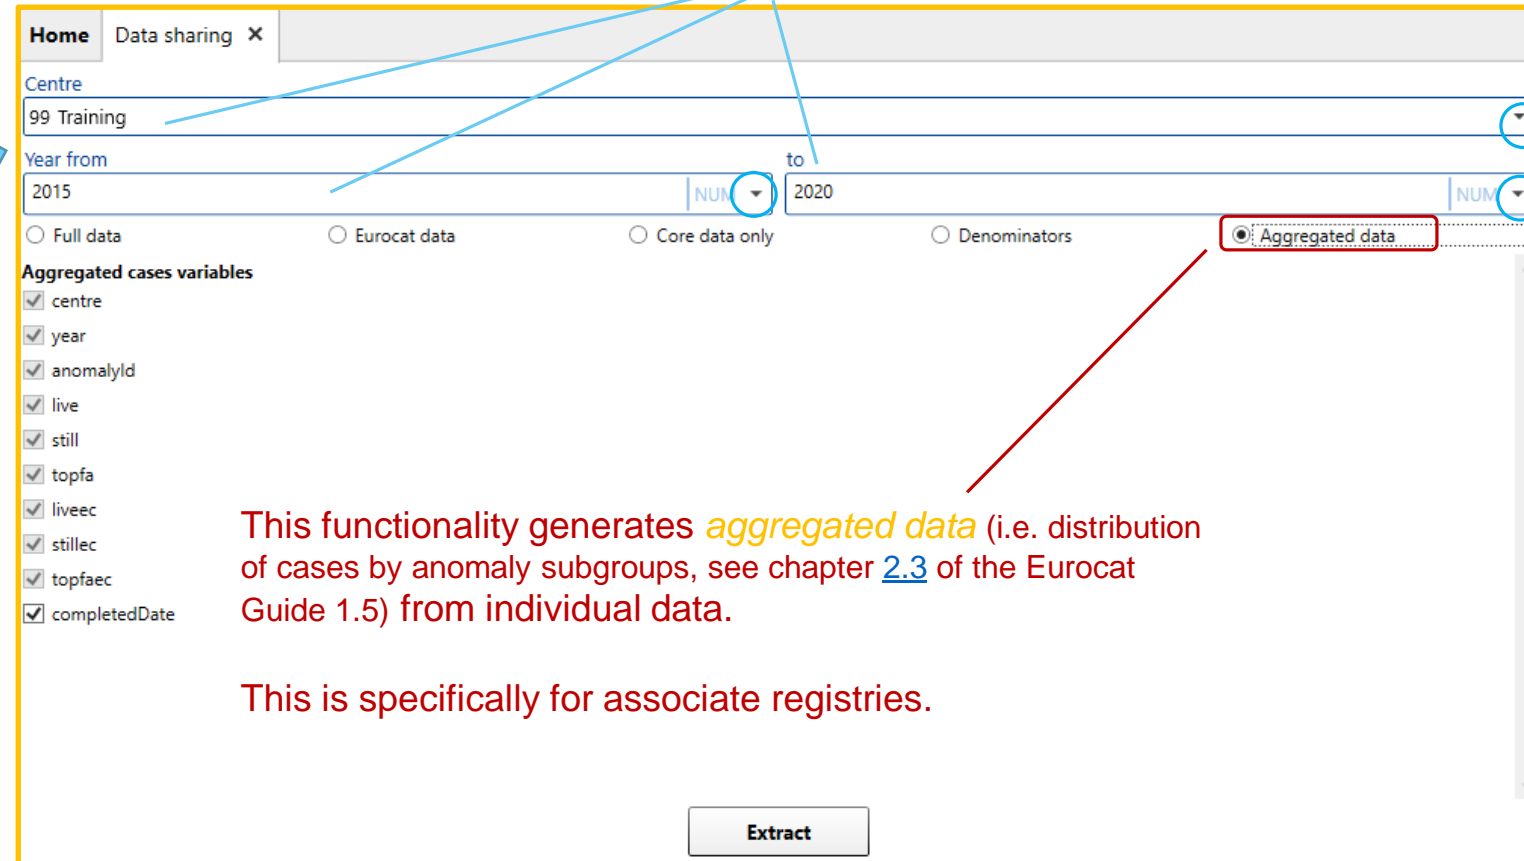

Selection can be further specified by unticking the check box next to the variables' name.
(Except for the main denominators)

Scroll down to the bottom of the variables list

5

Share aggregated data
Select the data to export

Select the Centre and the years for which you want to extract aggregated data.
(click on the arrows to display the dropdown lists or start typing the name of the registry or the year)

This functionality generates *aggregated data* (i.e. distribution of cases by anomaly subgroups, see chapter 2.3 of the Eurocat Guide 1.5) from individual data.

This is specifically for associate registries.

Aggregated data will be extracted as long as the following variables – at least – have been stored in DMS for individual cases:

CENTRE, NUMLOC, BIRTH_DATE, SEX, TYPE, NBRBABY, SURVIVAL, GESTLENGTH, WHENDISC, SYNDROME, MALFO1, MALFO2, MALFO3, MALFO4, MALFO5, MALFO6, MALFO7, MALFO8

Save extraction

deathdate Full date ▼
datemo Full date ▼

☑ sourcespontaneous
☑ sourceconfirmatory
☑ whenrep Full date ▼

Extract

Once you have selected the data (individual cases or denominators or aggregated data), click on extract to export the data to a csv file.

Save the data for the Central Registry

« DMS user guide › Export data ›

Search Export data

Organize ▼   New folder
